

Teaching Exam

Subject – Computer Science

INTRODUCTION TO PYTHON

Lecture No – 1

By–Satyendra Chaudhary Sir

Topics to be Covered

Topic

OOPS

Algorithms

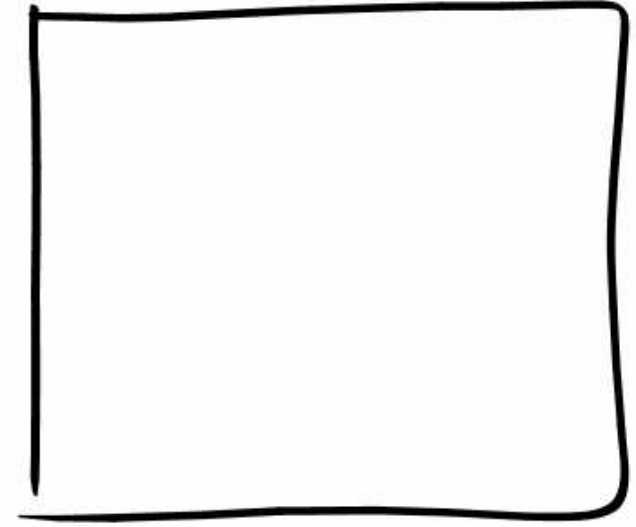

Python is a object oriented language.

* Object oriented languages, they are more connected to real world.

Python, C++, C#,

which follow OOPS concept → PEAI

```
class Student:  
    { name = "Rahul" ←  
      def. make_print(self, _____):  
      }
```

S1 = Student.name
S2 = Student.name.

Class Student :

name = "Karan"

object

S1 = (Student ())

print (S1.name)

Karan

S2 = student ()

print (S2.name)

Karan
Karan
|

when a class is called, it is called through

__init__ (constructor)

```
class Student:
```

```
    name = "Karan"
```

```
    def __init__(self):
```

```
        print("Object is created")
```

```
        print(self)
```

S1 = Student ()

S1.name

class student :

def __init__ (address, name, marks)

address. nam = name

address.mark = marks

print ("Object is created")

S1 = Student ("Rahul", 45)
print (S1.name, S1.mark)

multiple init methods

② def __init__ (self)
print ("Object is created")

S2 = Student ("Karan", 50)
Object

class student:

name = "Karan"

def __init__(self, names):

self.name = names

def name_print(self):

print("Hello", self.name)

decorator

@ staticmethod

def meth():

print("Hello")

S1 = student("Rahul")

S1.name_print()

S1.meth()

Rahul

① ____ represents an entity in real world with its identity and behaviour.

→ methods

→ object //

→ class

→ operator

— used to create object.

- class. ✗
- constructors.
- User defined functions.
- Inbuilt functions.

1) Polymorphism.

3) Abstraction.

2) Encapsulation.

concept of hiding details
of a object from outside world.

4) Inheritance.

SI. nameprint.

Class

Class. 1

Class 2

Class 3

Class 4

⇒ Procedural language.

⇒ Functional based ⇒ Functions

⇒ O O Languages → classes, objects.

Slide 5: Writing/Appending - Python

✓ write() ✓ writelines() ✓ Example:

```
with open("data.txt", "w") as f:  
    f.write("Hello World!\n")  
    f.writelines(["Line 2\n", "Line 3\n"])
```

2 mins Summary

TEACHING
WALLAH

Topic

Python → OOPS principle,

OOP → Algorithms

THANK YOU
